IN THE CLAIMS

Please **AMEND** claims 1-4, 8-13, 17-22, 26 and 27 as follows. Please **ADD** new claim 28.

1. (CURRENTLY AMENDED) An information processor comprising:

a control information retrieving part retrieving control information that is used to execute a<u>an installed</u> program, wherein said control information comprises:

current address information indicating a current address where the <u>installed</u> program is stored in a storage device; and

definition information including <u>information to retrieve and change the current</u> <u>address information of the installed software, the definition information including</u> at least one destination address information, <u>as indicated by a user, for related to the installed program and including at least one definition name uniquely assigned to the <u>installed programdestination</u> address information;</u>

a destination defining part <u>definingto define</u> the destination address information <u>that isas</u> indicated by <u>a the</u> user, <u>the destination address being and a location different from the current address where the <u>installed</u> program is stored;</u>

a moving part moving the <u>installed</u> program according to the destination address information indicated by the user, wherein said moving part comprises:

a copying part retrieving the current address information corresponding to said unique definition name uniquely assigned to the user indicated destination address information included in said control information in accordance with included in said definition information of the control information of the installed program, and copying, to the destination address information indicated by the user and included in the definition information of the control information of the installed program, all information, which is stored at the current address and comprises comprising the installed program, additional installed functions information, and optional settings information, in accordance with the destination address information; and

a deleting part deleting all of the information stored at the current address, including <u>deleting</u> the <u>installed</u> program; and

a control information changing part changing the control information <u>of the installed</u> <u>program</u> based on the destination address information <u>included in the definition information of the control information</u>.

- 2. (CURRENTLY AMENDED) The information processor as claimed in claim 1, wherein said control information changing part comprises a replacing part replacing the current address information with the destination address information to which the <u>installed</u> program is moved.
- 3. (CURRENTLY AMENDED) The information processor as claimed in claim 1, wherein said control information is generated when said <u>installed</u> program is installed into a storage device.
- 4. (CURRENTLY AMENDED) The information processor as claimed in claim 1, wherein said control information is referred to when said <u>installed</u> program is executed.
- 5. (ORIGINAL) The information processor as claimed in claim 1, wherein said control information is stored in a file referred to by other programs, and the file includes a plurality of control information to execute the other programs.
- 6. (PREVIOUSLY PRESENTED) The information processor as claimed in claim 1, wherein said control information changing part comprises a changing part changing said control information based on said definition information.
- 7. (PREVIOUSLY PRESENTED) The information processor as claimed in claim 1, wherein said control information changing part comprises a changing part changing the current address information included in said control information based on the destination address information included in said definition information.
- 8. (CURRENTLY AMENDED) The information processor as claimed in claim 1, wherein said control information comprises:

program information to execute the <u>installed</u> program; and data information related to data created or edited by executing said <u>installed</u> program, and

wherein said moving part comprises:

a program moving part moving the installed program; and

a data moving part moving the data when the <u>installed</u> program is moved by said program moving part.

- 9. (CURRENTLY AMENDED) The information processor as claimed in claim 1, further comprising an installing part installing said <u>installed</u> program.
- 10. (CURRENTLY AMENDED) A method of processing information comprising: retrieving control information that is used to execute a an installed program, wherein said control information comprises:

current address information indicating a current address where the <u>installed</u> program is stored in a storage device; and

definition information including <u>information to retrieve and change the current address information of the installed software, the definition information including at least one destination address information, as indicated by a user, for related to the <u>installed</u> program and including at least one definition name uniquely assigned to the <u>installed program destination</u> address information:</u>

defining the destination address information that is as indicated by a-the user, the destination address being and a location different from the current address where the installed program is stored;

moving the <u>installed</u> program according to the destination address information indicated by the user, wherein said moving comprises:

retrieving the current address information corresponding to said <u>unique</u> definition name uniquely assigned to the user-indicated destination address information included in said control information in accordance with included in said definition information of the control information of the installed program;

copying, to the destination address information indicated by the user and included in the definition information of the control information of the installed program, all information, which is stored at the current address and comprises comprising the installed program, additional installed functions information, and optional settings information, in accordance with the destination address information; and

deleting all of the information stored at the current address, including <u>deleting</u> the <u>installed</u> program; and

changing the control information of the installed program based on the destination

address information included in the definition information of the control information.

- 11. (CURRENTLY AMENDED) The method as claimed in claim 10, wherein said changing comprises replacing the current address information with the destination address information to which the <u>installed</u> program is moved.
- 12. (CURRENTLY AMENDED) The method as claimed in claim 10, wherein said control information is generated when said <u>installed</u> program is installed into a storage device.
- 13. (CURRENTLY AMENDED) The method as claimed in claim 10, wherein said control information is referred to when said <u>installed</u> program is executed.
- 14. (ORIGINAL) The method as claimed in claim 10, wherein said control information is stored in a file referred to by other programs, and the file includes a plurality of control information to execute the other programs.
- 15. (PREVIOUSLY PRESENTED) The method as claimed in claim 10, wherein said changing comprises changing said control information based on said definition information.
- 16. (PREVIOUSLY PRESENTED) The method as claimed in claim 10, wherein said changing comprises changing the current address information included in said control information based on the destination address information included in said definition information.
- 17. (CURRENTLY AMENDED) The method as claimed in claim 10, wherein said control information comprises program information to execute the <u>installed</u> program and data information related to data created or edited by executing said <u>installed</u> program, and wherein said moving comprises:

moving the <u>installed</u> program; and moving the data when the <u>installed</u> program is moved.

- 18. (CURRENTLY AMENDED) The method as claimed in claim 10, further comprising installing said <u>installed</u> program.
- 19. (CURRENTLY AMENDED) A computer readable recording medium recorded with a program code for causing a computer to process information, said program code comprising the codes for:

retrieving control information that is used to execute a <u>an installed</u> program, wherein said control information comprises:

current address information indicating a currently address where the <u>installed</u> program is stored in a storage device; and

definition information including <u>information to retrieve and change the current address information of the installed software, the definition information including at least one destination address information, as indicated by a user, for related to the <u>installed program and including at least one definition name uniquely assigned to the installed program destination address information:</u></u>

defining the destination address information that is as indicated by a the user, the destination address being and a location different from the current address where the installed program is stored;

moving the <u>installed</u> program according to the destination address information indicated by the user, wherein said code for moving comprises the codes for:

retrieving the current address information corresponding to said <u>unique</u> definition name uniquely assigned to the user-indicated destination address information included in said control information in accordance with <u>included in</u> said definition information <u>of the control</u> information of the installed program;

copying, to the destination address information indicated by the user and included in the definition information of the control information of the installed program, all information, which is stored at the current address and comprises comprising the installed program, additional installed functions information, and optional settings information, in accordance with the destination address information; and

deleting all of the information stored at the current address, including <u>deleting</u> the <u>installed</u> program; and

changing the control information of the installed program based on the destination address information included in the definition information of the control information.

- 20. (CURRENTLY AMENDED) The computer-readable recording medium as claimed in claim 19, wherein said code for changing comprises code for replacing the current address information with the destination address information to which the <u>installed</u> program is moved.
- 21. (CURRENTLY AMENDED) The computer-readable recording medium as claimed in claim 19, wherein said control information is generated when said <u>installed</u> program is installed into a storage device.
- 22. (CURRENTLY AMENDED) The computer-readable recording medium as claimed in claim 19, wherein said control information is referred to when said <u>installed</u> program is executed.
- 23. (ORIGINAL) The computer-readable recording medium as claimed in claim 19, wherein said control information is stored in a file referred to by other programs and the file includes a plurality of control information to execute the other programs.
- 24. (PREVIOUSLY PRESENTED) The computer-readable recording medium as claimed in claim 19, wherein said code for changing comprises the code for changing said control information based on said definition information.
- 25. (PREVIOUSLY PRESENTED) The computer-readable recording medium as claimed in claim 19.

wherein said code for changing comprises the code changing the current address information included in said control information based on the destination address information included in said definition information.

26. (CURRENTLY AMENDED) The computer-readable recording medium as claimed in claim 19, wherein said control information comprises program information to execute the <u>installed</u> program and data information related to data created or edited by executing said program, and

wherein said code for moving comprises the codes for:

moving the <u>installed</u> program; and moving the data when the <u>installed</u> program is moved.

- 27. (CURRENTLY AMENDED) The computer-readable recording medium as claimed in claim 19, further comprising the code for installing said <u>installed</u> program.
- 28. (NEW) A computer readable recording medium storing a software setup program to control a computer according to a process comprising:

presenting to a user a selectable installed software move function to move the installed software from one computer readable storage area to another computer readable storage area;

defining a destination address that is different from a current address where the software is stored, if the user selects the installed software move function;

reading definition information of the installed software to retrieve and change current address information of the installed software, the definition information including at least one destination address, as indicated by the user according to the defining of the destination address for the installed software, and including at least one identifier assigned to the installed software;

retrieving registry information of the installed software used to execute the installed software, according to the reading of the identifier of the installed software in the definition information of the installed software, the registry information of the installed software comprising a current address where the installed software is stored in a storage device;

copying all information, which is stored at the current address of the installed software retrieved from the registry information of the installed software, including the installed software, additional installed functions information, and optional settings information, according to the destination address in the definition information of the installed software;

deleting all of the information stored at the current address, including the installed software; and

changing the registry information of the installed software based on the destination address in the definition information of the installed software.
